

WIZARD GOLD WELDING AUTOMATION

WHAT IS WELDING AUTOMATION ?

Welding Automation involves using technology to join materials together faster, and more efficiently than using human labour alone. Welding automation comes in many forms. Because there are many types of welding, there are many ways automation can integrate robotics or other automation technology into welding processes.

HOW WELDING AUTOMATION BENEFITS YOUR BUSINESS

Welding automation strategically integrates technology into your welding processes. Welding automation benefits includes reduced cycle time, improved weld consistency, improved weld consistency, improved worker safety, custom tooling, increased uptime, reduced labor costs, and conservation of materials.
